

Gaurang Vank

Sr. Product Designer

> I design products that make technology feel more human and a little less robotic. My focus is turning complex systems (from Agentic Systems to global-scale platforms)into experiences that feel effortless and alive.
>
> I love working where logic meets emotion, where a clean interface suddenly makes people say, “Oh, that just works.” Whether it is building agentic systems at Software Co, refining AI-driven experiences at Rooteam, or developing 3D VR systems at Maknon, I chase the balance between clarity and delight.
>
> When I am not refining pixels, or sharing insights as a design content creator, you will likely find me building with Other Designers or exploring the world on two wheels. To me, good design quietly gets out of your way. It listens, adapts, and just feels right. And yes, I still believe one more iteration can make all the difference

Education

Atmiya University
Bachelor’s of Computer Applications
2019-2022

Saurashtra University
Master of Science in Information Technology
2022-2024

Experience

Aug 2024 - Present · Ahmedabad
Sr. UI/UX Designer
Software Co

Leading the design of a SaaS-based fitness and recovery platform focused on personalised rehabilitation and performance tracking. The product addresses a critical gap where users lack structured guidance for injury-specific recovery and goal-oriented fitness journeys.

Designed an end-to-end experience that enables users to track workouts, monitor nutrition, and adapt routines based on individual needs. Built a flexible system tailored for both consumers and fitness-focused users, ensuring usability across varying levels of expertise.

Introduced an AI-driven recommendation engine that analyses personal metrics to generate customised exercise and nutrition plans. This enabled users to receive adaptive guidance for recovery, weight management, and performance improvement, making the experience more intelligent and outcome-driven.

Apr 2022 - July 2024 · Rajkot
Sr. UI/UX Designer
Rooteam India

Led UX initiatives for scalable digital products, improving usability and streamlining complex workflows across platforms. Delivered consistent on-time execution (95%+) while balancing speed with quality.

Worked cross-functionally with developers and stakeholders to solve high-friction user problems, translating ambiguous requirements into clear, intuitive interfaces. Played a key role in debugging UX issues and optimising frontend experiences for smoother user journeys.

Guided junior designers and contributed to building a collaborative, high-performance design culture.

Feb 2021 - Mar 2022 · Ahmedabad
UI/UX Designer
Maknon PVt. Ltd

Designed a 3D/VR-based product for the textile industry, enabling users to visualise and customise home interiors using tiles, marble, and furniture in an immersive environment. The platform helped bridge the gap between physical showroom browsing and real-world visualisation.

Led the design of interactive user flows and interfaces that allowed users to seamlessly create and explore personalised space configurations. Focused on simplifying complex 3D interactions into intuitive experiences accessible to non-technical users.

Jan 2019 - Jan 2021 · Morbi
UI/UX/Graphics Designer
Pointsales Pvt. Ltd.

Redesigned onboarding and core product flows for a business platform, reducing onboarding time by 30% and increasing user satisfaction by 20%. Focused on simplifying complex workflows into intuitive, task-driven experiences.

Conducted user research and usability testing to identify friction points, translating insights into actionable design improvements. Improved system usability through structured design audits and iterative enhancements.

Where Ideas Come Alive

HUSK

A personalised fitness ecosystem that combines workout tracking, nutrition management, and AI-driven recommendations to support recovery and performance. Built to transform how users approach injury-specific training and long-term fitness goals.

View Case Study

Forky

A discovery platform designed to help users explore events, restaurants, and experiences happening around them. It simplifies decision-making by combining curated listings with intuitive browsing and filtering.

View Case Study

Clinic 1

An AI-driven operating system for modern healthcare clinics, designed to automate workflows, enhance practitioner efficiency, and deliver a more seamless patient experience across the care journey.

View Project

Zenta Health

A healthcare service platform designed to connect families with trusted, personalised home care solutions. Focused on simplifying care access, it enables users to find, evaluate, and manage healthcare services with clarity and confidence.

View Project

Flash X

A comprehensive security infrastructure that blends hardware-based encryption with intelligent software systems to deliver scalable, resilient, and real-time protection for modern digital environments.

View Project

Go Levita

A personalised fitness ecosystem that combines tracking, nutrition, and AI-driven intelligence to support recovery and performance. Built to transform how users approach injury-specific training and sustainable fitness goals.
